

# HEALTHLINK SECURE THE TRANSMISSION OF MEDICAL RECORDS

New Zealand based health system integrator HealthLink ensures that patients' medical records can be quickly and safely transported between healthcare providers throughout New Zealand anywhere - anytime.

## Business need

As the leading Australasian provider for the secure electronic transfer of patient information, HealthLink has been instrumental in eradicating inefficient and unreliable paper-based communication. HealthLink transmits more than 100 million clinical messages annually between over 30,000 healthcare practitioners. It is vital that this infrastructure stays up and running so that medical professionals can treat patients quickly and efficiently. A secure, reliable network is key to keeping this infrastructure operational.

## Solution

In order to ensure the HealthLink network is reliable around the clock, two SonicWall NSA 4600s were installed in Auckland and another two were installed in Hamilton. These four firewalls provide the infrastructure for the HealthLink network. Further, SonicWall solutions are provided to HealthLink clients, including doctors, specialists, radiologists, pharmacies, and hospitals. These solutions range from SonicWall SOHO to SonicWall NSA 4600s.

## Results

HealthLink's clients have been exceptionally happy with the SonicWall solutions as they are able to track security and behaviour, and run reports on a daily, weekly or monthly basis. SonicWall is a solution known for its simplicity, agility and flexibility.

## Benefits

- Reliability
- Security
- Remote Access

## Solutions at a glance
